

Movie Joiner (by MovieToolbox) is a simple tool, which helps you to join several video or audio files into one large one.

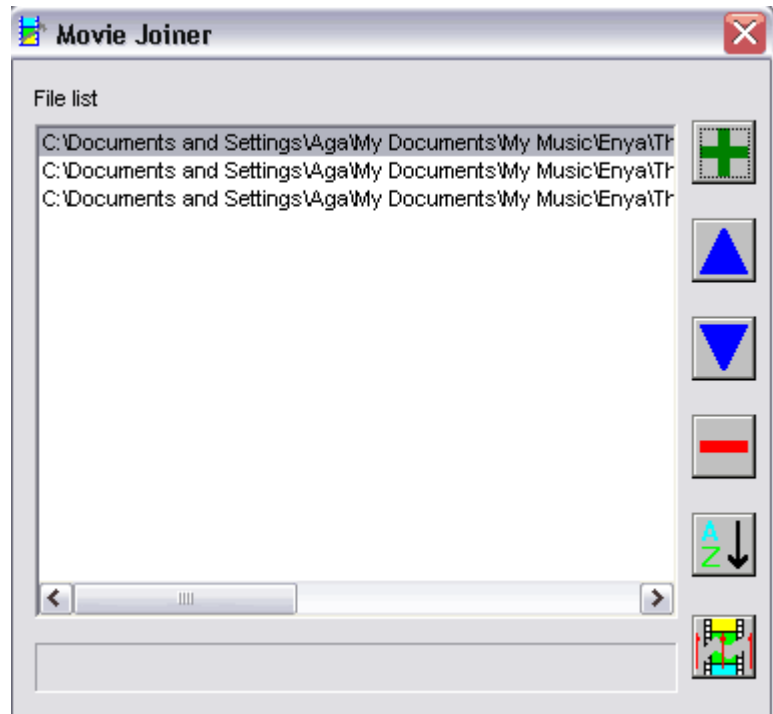

Movie Joiner is shareware software. You can work with unregistered version, but unregistered version joins only three files at a time. You can keep adding next ones to already joined file to create a compilation of many more.

Registered version joins an unlimited number of files. You can register Movie Joiner for \$19.00. Visit <http://www.movietoolbox.com/registration.html> page, to register the software.

You can join the following formats:

- AVI (\*.avi, \*.divx),
- MPEG layer 1, 2, 3  
(\* .mpg, \*.mpeg, \*.m1v, \*.m2v, \*.mp3),
- WMV  
(\* .wmv, \*.asf, \*.asx, \*.wma),
- QuickTime (\*.mov;\*.qt),
- Real Media (\*.rm),
- MPEG-4 (\*.mp4) files.

All selected files must be of the same format.

How to use

1. Press  (Add) button to open file open dialog. Select files you want to join. You can select several files at once (press down and hold the 'Ctrl' key while selecting files). You can remove files from the list, using  (remove) button. You can preview selected file double-clicking on it.
2. Arrange files using  (up) and  (down) buttons or  (sort) button.
3. Click  (join) button. Select target file name and click "Save" button in the file save dialog.
4. Program will ask you if you want to show the result. You also can remove source files after join.
